Dear Sir/Madam

Please find enclosed our submission on the Proposed Natural Resources Plan for the Greater Wellington Region.

This replaces the interim submission we put in before the 25<sup>th</sup> of September.

Also enclosed are the submissions of 49 of our members some of whom have added extra comments.

Our society and it's members were granted an extension of the submission deadline to the 23<sup>rd</sup> of October 2015.

Yours sincerely

Leo Vollebregt  
Chairman

<b>Definitions</b>				
Category A groundwater	Groundwater directly connected to surface water at the locations generally shown in Figures 7.2, 7.5, 7.6, 7.7, 7.8 and 7.9 in chapter 7; Figures 8.1 and 8.2 in chapter 8; and Figure 10.1 and 10.2 in chapter 10. Taking water from <b>Category A groundwater</b> is considered to be <b>surface water allocation</b> .	amend	<p>The categorisation of groundwater needs clarification in the definitions. The connectivity between various ground water takes has not been verified and amongst the users there is significant doubt. Expecting users to individually verify as consents are renewed is expensive and potential use of water is restricted unnecessarily impacting on farm businesses severely.</p> <p>The definitions of Category A, B and C groundwater need to be robust, and a mechanism or process must be provided for identifying which Category aquifer a particular abstraction may be tapping. Since any conditions must be related to the 'effects', it would seem that Category A (i.e. direct connection) should be able to demonstrate a strong and consistent relationship between daily river levels and daily groundwater levels. If not then conditions linked to low flows will have no relevance. There should also be a clear and quantifiable difference between Category A &amp; B. at present the 'management approach' appears to be the same even though the two aquifers are demonstrably different in their response to river levels.</p> <p>In February 2015 work undertaken in the river bed by the Waihenga river level recorder interfered with readings so that consent holders unknowingly resumed taking water even though the river had reached minimum flow. Observers working by the river reported no adverse</p>	<p><u>Ground water will be categorised A or B or C once GW has field verified its connectivity with surface water and performed an empirical calibration of the model</u></p>
Category B groundwater (directly connected)	Groundwater not classified as either <b>category A groundwater</b> or <b>category C groundwater</b> and which is defined as being directly connected to surface water through applying the tests in Schedule Q (efficient use). <b>Category B groundwater (directly connected)</b> is at the locations generally described in Tables 7.3 and 7.4 in chapter 7, Table 8.2 chapter 8 and Table 10.2 in chapter 10. Taking water from <b>category B groundwater (directly connected)</b> is considered to be <b>surface water allocation</b> .			
Category B groundwater (not directly connected)	Groundwater not classified as either <b>category A groundwater</b> or <b>category C groundwater</b> and which is defined as being not directly connected to surface water through applying the tests in Schedule Q (efficient use). <b>Category B groundwater (not directly connected)</b> is at the locations generally described in Table 7.5 in chapter 7, Table 8.3 in chapter 8 and Table 10.3 in chapter 10. Rule R135: General rule for taking, use, damming and diverting water – discretionary activity	The damming or diverting of water that would otherwise contravene sections 14(2) or 14(3) of the Resource Management Act 1991 and is not permitted, controlled, restricted discretionary, discretionary, non-complying or a prohibited activity is a discretionary activity.	amend	The investment in infrastructure by users is significant and making this rule restricted discretionary gives consent holders more certainty at the time of consent renewal	Make this rule <u>restricted discretionary</u>

<p>Other methods</p>				

Method M13: Wairarapa water races	Wellington Regional Council will work with Wairarapa district councils and landowners to characterise the hydrology, water quality, ecology, and the social, heritage and cultural values of the Wairarapa water races to develop management options for the water race systems by 2017. The management options include, but are not limited to:	amend	The economic values of water races are very important to land owners who have them. They were put in place so that the surrounding land could be farmed.	In opening paragraph insert after cultural values <u>and economic values</u> of the Wairarapa water races...
Method M18: Water user groups	Wellington Regional Council will:  (a) support water user groups, or voluntary agreements between water users, to share takes and manage allocations, and  (b) support water user groups to assist with water sharing during times of restrictions or when the catchment is fully allocated, and  (c) provide, where available, accurate technical information to assist user groups.	Support	Method 18 (water user groups) will work well but transferring water needs to be a permitted activity.	retain
Method M19: Water management (d)	(d) promoting alternatives to the use of water races, and	amend	Costs of change will be substantial for some landowners. Access to power and underground water as well as maintenance of fenced off races are issues.	Change wording of (d) to <u>quantify costs and benefits of water races and explore alternatives</u>
Method M28: Development of good management practice guidelines.	Wellington Regional Council will continue to develop practices, procedures and tools (including rules) in collaboration with industry, other relevant organisations and stakeholders to support the	support	good method esp. the use of the words "collaboration with industry"	retain

	implementation of policies which rely on <b>good management practice</b> to achieve desired environmental outcomes.		positive move which will have farmers moving forward in their practices with the reg. council??	
<u>uamahanga</u> <u>/haitua</u>	When allocating river water or <b>groundwater directly connected to surface water</b> , regard shall be given to cumulative adverse effects on aquatic ecosystems in downstream river reaches as a result of flow depletion from loss of river water to groundwater.	amend	Important that the effects are measured, not just modelled.	Insert after - adverse effects – <u>that are measured on aquatic ...</u>
Policy R.P3: cumulative effects in river reaches of allocating water				
Figures 7.3 – 7.8	Water allocation amounts	Oppose	Again the categories need <u>empirical</u> verifying. Too big an impact and too little evidence of benefit to the environment to ignore. As a community we need to verify categories and as this occurs the amounts in these tables may change significantly	<u>Do not include figures 7.3 – 7.8 in the plan until categories have been verified</u>
Tables 7.3 – 7.5	Surface and groundwater allocation amounts	Oppose	The allocation amount should reflect the current consented allocation amount. Some of the allocation amounts are considerably lower than the allocation currently consented. Consideration of consent applications has confirmed the amounts of allocation that are sustainable. Setting an allocation limit which is inconsistent with consented and sustainable allocations creates an unrealistic community expectation of the level of abstraction which can occur from the water sources.	<u>Change the allocation amounts to what is currently allocated or more if spare water has been identified</u>

<p>Schedule R: guideline for stepdown allocations</p>	<p>When river flows are low, stepdown allocations may be included as conditions of resource consent when rivers approach <b>minimum flows</b>.</p> <p>Stepdown allocations may require a take to cease or be reduced. Taking water that is not for the health needs of people may be required to cease or be reduced as flows approach minimum river flows. Typically, the reduction in water take that may be required will be half the consented amount.</p> <p>Stepdown allocations for specific rivers are identified in Table R1 unless otherwise agreed by a water user group. In other rivers, stepdown allocations may be agreed by a water user group, or in the absence of agreement or such a group, may be implemented by the Wellington Regional Council.</p>	<p>Support with amendments</p>	<p>Schedule R – guideline for stepdown allocations – good schedule and good use of user groups</p> <p>However needs of stock drinking water and rootstock protection needs acknowledging</p> <p>However more and more appropriate management points e.g. further south of Waihenga are required. GW to establish in consultation with water users.</p> <p>As water is cleaned up the minimum flow requirement for dilution is lower.</p> <p>The effects of low flows needs to demonstrated as are the effects of restrictions</p> <p>There also needs to be room for the Whaitua to have their input</p>	<p>Add after health needs of people - <u>stock drinking water and rootstock protection</u></p> <p>Table R1 is interim GW to consult with water users</p>

In my submission I reject GWRC defining, the new aquifer water boundaries ( the RMA clearly states they are a guide only ). GWRC have created a ground water model based on a very expensive, very inaccurate conceptual computer model to further there proposed plan. In there arrogance they have ignored allowing newer information based on science and hydrology to adjusting aquifer water takes on where they are situated that disproves there theoretical models boundaries.

Some years ago I had a transducer placed in my bore, situated around the tawaha and lower valley aquifers, I think the caterogory A and B zones now,( and neighbouring bores) for many months. The hydrology quite clearly showed that the water levels didn't respond to the Ruamahunga river, but responded to similar bores in the lower valley aquifers which are considered not to be part of the river recharge system.

Also my bores water quality/chemistry is similar to the lower valley system and dissimilar to the river recharge aquifer system. The GWRC have placed my bore in zone that quite clearly is wrong ( which affects conditions in my consent) and before they start writing rules in stone they need to be more flexibility as new information comes to hand.

The GWRC conceptual model actually comprises the integrity of the groundwater model. They need to stop playing God and look at the facts and work with stakeholders on real facts and not political spin and bureaucratic incompetence, before effecting our local economy and our most plentiful resource.

A handwritten signature in black ink, appearing to read 'John Petrie'. The signature is written in a cursive, flowing style with some overlapping strokes.
